                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 74 DNA polymerase and 74 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWSA2 (gil473214/gb)AF129072.l), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     quality sequence stop: 618

This represents a murine RANKL, a ligand for the RANK (receptor cc activator of necrosis factor-kappaB (NF-kB)) polypeptide. RANK is a cc member of the tumour necrosis factor (TNF) family. A soluble RANK is a cc may be used for inhibiting activation of NF-kB, by contacting a cell cexpressing membrane-associated RANK with a soluble RANK which binds to call cexpressing membrane-associated RANK with a soluble RANK which binds to call cexpressing membrane-associated RANK with a soluble RANK which binds to call certain the composition of NF-kB, by contacting a cell certain cell sand enhance their cells and enhance their resoluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory cells creations. They can also be used in adjunct therapy for disease cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK. Pankl. polypeptides of from the negative effects of chemotherapy or the presence of high levels cells strate and also be used for detection and drug cells from the negative effects of chemotherapy or the presence of high levels cells strate products can also be used for detection and drug cells creening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 망

RANK is a member of the tumour necrosis factor (TNF) family. Host cells transformed or transfected with an expression vector comprising the RANK encoding nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to RANK ligand (RANKL). The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1998-377655/32.

CC Rappas (RANK) proteins and their corresponding DNAs. RANK is a member of the tumour necrosis factor (TNF) receptor superfamily and associates with TNF receptor associated factor (TNF)? and 3 which are important in the regulation of immune and inflammatory response. The receptors of immune and inflammatory response. The receptors of immune and inflammatory response. The receptors of immune and inflammatory responses. The receptors of inhibitors of these receptors. The cytoplasmic domain of RANK is used in developing assays for inhibitors of signal transduction, e.g. for screening the molecules that inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, TRAF5 and particularly TRAF6. NF kappab inhibition by RANK antagonists or response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, acute inflammatory cresponse that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions. RANK acts as an anticomplete forms of the receptor are used in vivo or in vitro based of care in the composition of the receptor are used in vivo or in vitro based care useful not be signal via RANK. RANK compositions are used in the careful state of both agonists or antagonists of RANK activity as a sample of the receptor are used in vivo or in vitro based of care useful for modulating that interfere with RANK/TRAF6 interactions are useful for modulating that interfere with RANK/TRAF6 interactions are useful for the expression of recombinant proteins, as probes for analysis of the presence or distribution of RANK transcripts, while the proteins are useful in preparing kits for the detection of soluble RANK, or monitor RANK ligand

07-MAR-1997;
14-OCT-1997;
The present invention relates to receptor activator of NF-chi B (RANK) DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to chromosome 13q14. RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2 and TRAFF3. The DNA molecules are useful for producing ligands of RANK.
                                                                                                                                                                                                                                                                                                                                           Key

Triggering of RANK by overexpression or co-expression CC of RANK and membrane bound RANK ligand (RANKL) results in upregulation CC of the transcription factor NF kappaB, a ubiquitous transcription factor CC that is most extensively utilised in cells of the immune system. CC inhibition of Nf-kappaB by RANK antagonists is useful in ameliorating CC negative effects of inflammatory reactions, and the effects of excess CC bone resorption. The RANK DNAS, proteins and their analogues are useful CC for the preparation of pharmaceutical compositions, for infecting target CC cells for use in gene therapy applications in diagnosing diseases CC associated with RANK, and as targets for use in screening assays. They CC may be used in the treatment or diagnosis of immune system dysfunction. CC The present invention also encompasses gene therapy methods to correct CC gene-activating mutations, associated with e.g. familial expansile CC osteolysis (FEO) and early onset Paget's disease of bone (EP). The CC present amino acid sequence is murine RANKI (muranKL) protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Osteoprotegrin (OG) in biological samples; to screen for specific binding agents (particularly agonists and antagonists including cintracellular proteins); to raise Ab (useful in immunoassays for detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation and activation receptor (ODAR). The nucleic acid molecule encoding OPG binding protein can be used to detect OPG binding protein-encoding CS sequences, e.g. screening for related sequences, also to produce CC transgenic animal models, while complementary sequences are used for antisense regulation of OPG binding protein expression, Modulators of OPG binding protein, particularly soluble forms of OPG binding protein complementary sequences, a steeporosis, bone loss caused by arthritis or metastases, hypercalcaemia, Paget's CC disease, periodontal disease, osteoporosis, loosening of prostheses, optionally in combination with agents that promote bone growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PFH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

                                                                                                                                                                                                                     499E9 may be used to modulate immune responses in abnormal situations, e.g. autoimmune disorders including rheumatoid arthritis, systemic lupus erythematosus, Hashimoto's autoimmune thyroiditis, as well as acute inflammatory responses in which T-cell expansion, activation or immunological T-cell memory play an important role. The antibodies can be used to raise anti-idiotypic antibodies which will be useful in detecting or diagnosing various immunological conditions related to the expression of antigens of 499E9. The antibodies, and fragments of 499E9 can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation (e.g. cancerous conditions) or degenerative conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW59654 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                    The present sequence represents murine TNF-related activation induced CC cytokines (TRANCE). Human or murine TRANCE polypeptides or their CC variants, fragments, derivatives or analogues may be used as modulators of immune response in a mammal comprising, antisense sequences to CC of immune response in a mammal comprising, antisense sequences to CC RANCE and fusion proteins comprising human and/or murine TRANCE.

CC Agonists and antagonists of TRANCE, can be used to modulate immune creasing or decreasing the life span of mature dendritic CC cells and increasing or decreasing T cell activation. These techniques are especially useful for treating immune system related conditions such CC as HIV, cancer, autoimmune disease or hypersensitivity to an allergen. The TRANCE polypeptides can be used to increase the viability of CM centric cells in vivo or in vitro, especially when used in conjunction with proteins of the tumour necrosis factor (TNF) superfamily (especially CD40L or TNF-alpha).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TRANCE; tumour necrosis factor superfamily; signal transduction; TNF-related activation induced cytokine; immune response; cancer autoimmune disease; HIV; hypersensitivity; allergen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY91024
                             The present invention describes a genomic DNA encoding a protein having an activity of supporting or promoting differentiation and maturation of osteoclasts. The genomic DNA encoding a protein has the following properties: (a) combines specifically with osteoclastogenesis inhibitory factor (OCIF) and has a high affinity; (b) shows a molecular weight (mw) of 30,000 to 40,000 by SDS-PAGE (sodium dodecyl sulfate-polyacrylamide gel electrophoresis) under a nonreductive condition and the apparent mw when crosslinked with monomer type OCIF is 90,000 to 10,000; and (c) has an activity of supporting or promoting differentiation and maturation of osteoclast in the co-culture of mouse osteoblast-like stroma cell and mouse spleen cell in the presence of a bone absorption promoting factor such as active type vitamin D3 and parathyroid hormone (PTH). The protein represents a mouse OCIF binding molecule (OBM) from the present
                                                                                                                                                                                                                                                                                                            (YSNE-)

Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastogenesis in a dose dependent manner. The OPGL protein is synthesised as a type II transmembrane protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. It is also an activator of mature osteoclasts. The oFGL is also an activator of mature osteoclasts. The specification describes a method for the in vivo down-regulation of OPGL activity in an animal. The method comprises using at least one OPGL polypeptide or subsequence, and/or at least one OPGL polypeptide or subsequence, and/or at least one OPGL polypeptide are useful for treating, preventing and ameliorating osteoporosis or other discrete.
                                                                                                                                                                                                                                                                  Osteoprotegerin ligand; OPGL; osteoprotegerin; osteoclastogenesis; tumour necrosis factor receptor; type II transmembrane protein; osteoclast differentiation; CSF-1; osteoclast activator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

The OPGL protein is synthesised as a type II transmembrane protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. It is not capable of inducing osteoclast differentiation in the absence of CSF-1. OPGL is also an activator of mature osteoclasts. The specification describes a method for the in vivo down-regulation of OPGL activity in an animal. The method comprises using at least one OPGL polypeptide or subsequence, and/or at least one OPGL analogue to induce an immune response in the animal. The method and OPGL polypeptide are useful for treating, preventing and amellorating osteoporosis or other diseases or conditions characterised by excessive bone resorption.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the protein sequence for rat Osteoclast Differentiation Factor (ODF). ODF is thought to be directly involved in the differentiation of monocytes/macrophages into osteoclasts. Osteoclasts promote dissolution of the bone matrix and solubilisation of bone salts. The ODF coding sequence is useful in gene therapy, and as hybridisation probes or primers. ODF protein is useful for modulating the activity of cells, e.g., cell proliferation, cell differentiation and cell viability, as immunogens to generate anti-rat ODF antibodies, and as vaccines. Anti-rat ODF antibodies are useful in assay methods for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid encoding rat osteoclast differentiation useful for modulating activity of a cell, e.g., cell prolif

```
The present sequence is human osteoprotegerin (OPG) binding protein.
CC Host cells transfected with vectors containing nucleic acid molecules
CC encoding OPG binding protein are used to produce recombinant OPG binding
CC protein. OPG binding protein is used in binding assays to determine
CC protein. OPG binding protein is used in binding assays to determine
CC binding agents (Particularly agonists and antagonists, including
CC intracellular proteins); to raise Ab (useful in immunoassays for
CC detection of OPG binding protein) and to identify compounds that
CC modulate binding of OPG binding protein to osteoclast differentiation
CC and activation receptor (ODAR). The nucleic acid molecule encoding OPG
CC binding protein can be used to detect OPG binding protein-encoding
CC sequences, e.g. screening for related sequences, also to produce
CC transgenic animal models, while complementary sequences are used for
CC of antisense regulation of OPG binding protein expression. Modulators of
CC or Ab, are used to treat or prevent bone diseases, e.g. osteoporosis,
CC one loss caused by arthritis or metastases, hypercalcaemia, Paget's
CC disease, periodontal disease, osteoporosis, loosening of prostheses,
CC optionally in combination with agents that promote bone growth.

                                                                                                                                       allo-stimulatory capacity, thereby augmenting an immune response. The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK-expressing cells from the negative effects of chemotherapy or the presence of high levels of TNF-alpha. The products can also be used for detection and drug
                                                                                                                                                                                                                                                                                                                                                      This represents a human RANKL, a ligand for the RANK (receptor activator of necrosis factor-kappaB (NF-kB)) polypeptide. RANK is a member of the tumour necrosis factor (TNF) family. A soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to RANK ligand (RANKL). RANKL polypeptides can activate RANK and can be used to induce maturation of dendritic cells and enhance their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1998-377657/32.
